

Inspiring the Martians of Tomorrow

National Council of Space Grant Directors Meeting
Arlington, VA - March 3, 2017
Virginia Barnes, Challenger Center Chair Elect

MARTIANS OF TOMORROW

The Martians of Tomorrow are different.

They are a new species formed on Earth to discover new worlds.

They are the biologists, geologists, and roboticists of the future.

They are trailblazers who inspire Earthlings.

They develop skills that will be the envy of their friends.

Their first mission could be Expedition Mars at a Challenger Learning Center.

Take a pledge and help turn the students of today into the Martians of Tomorrow.

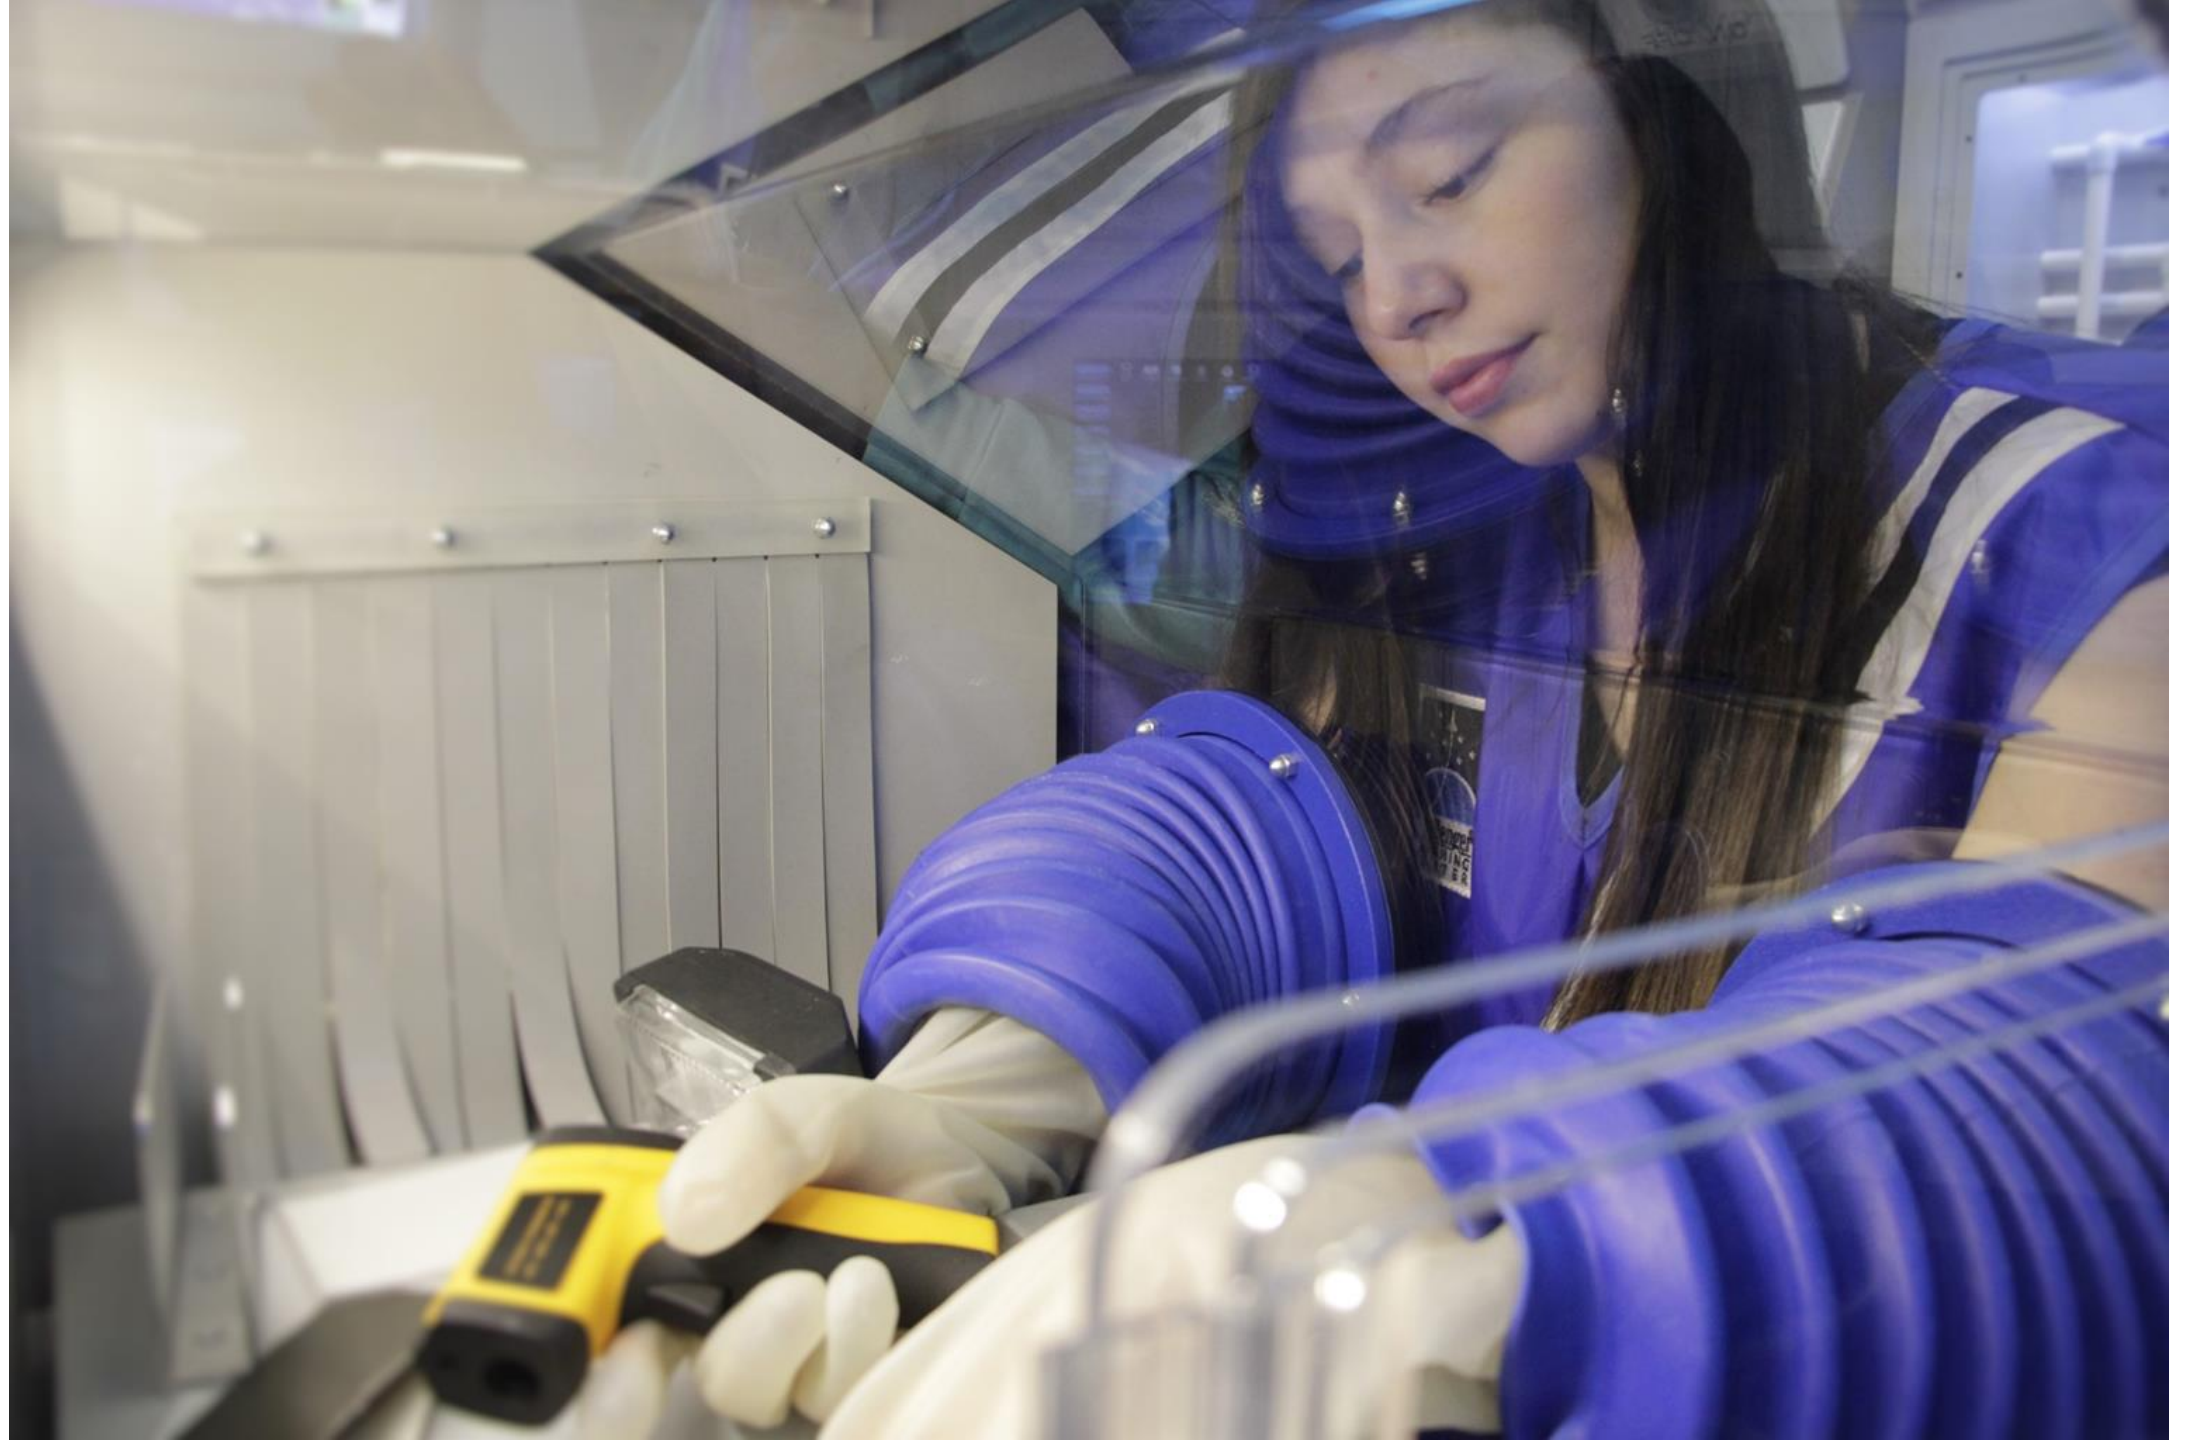

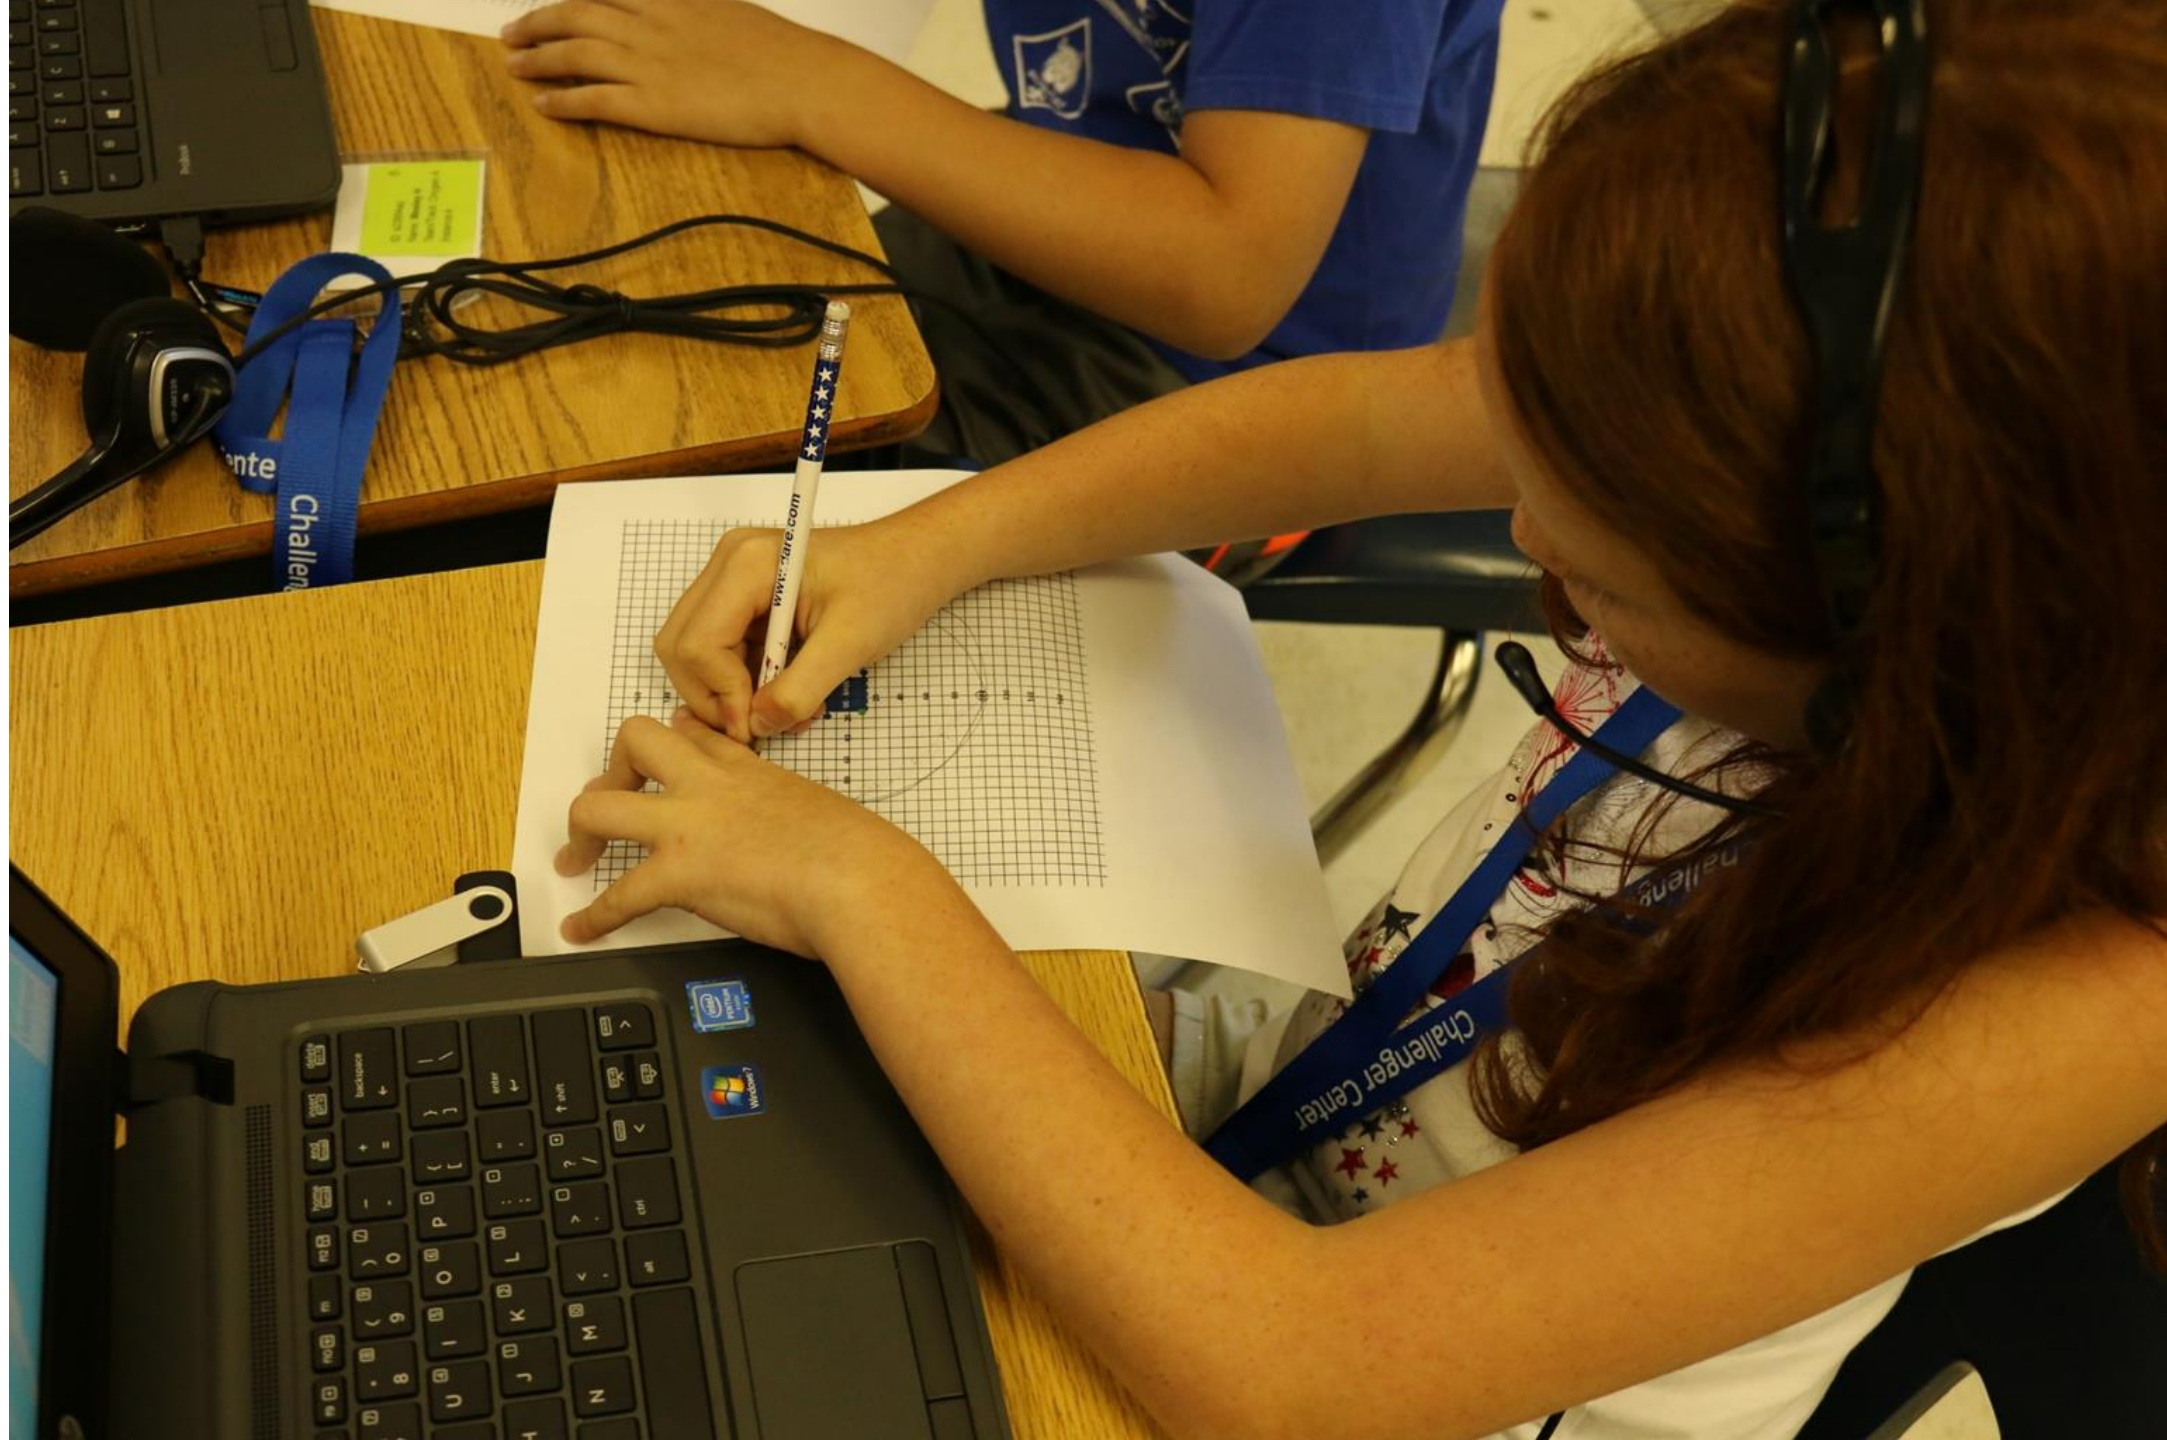

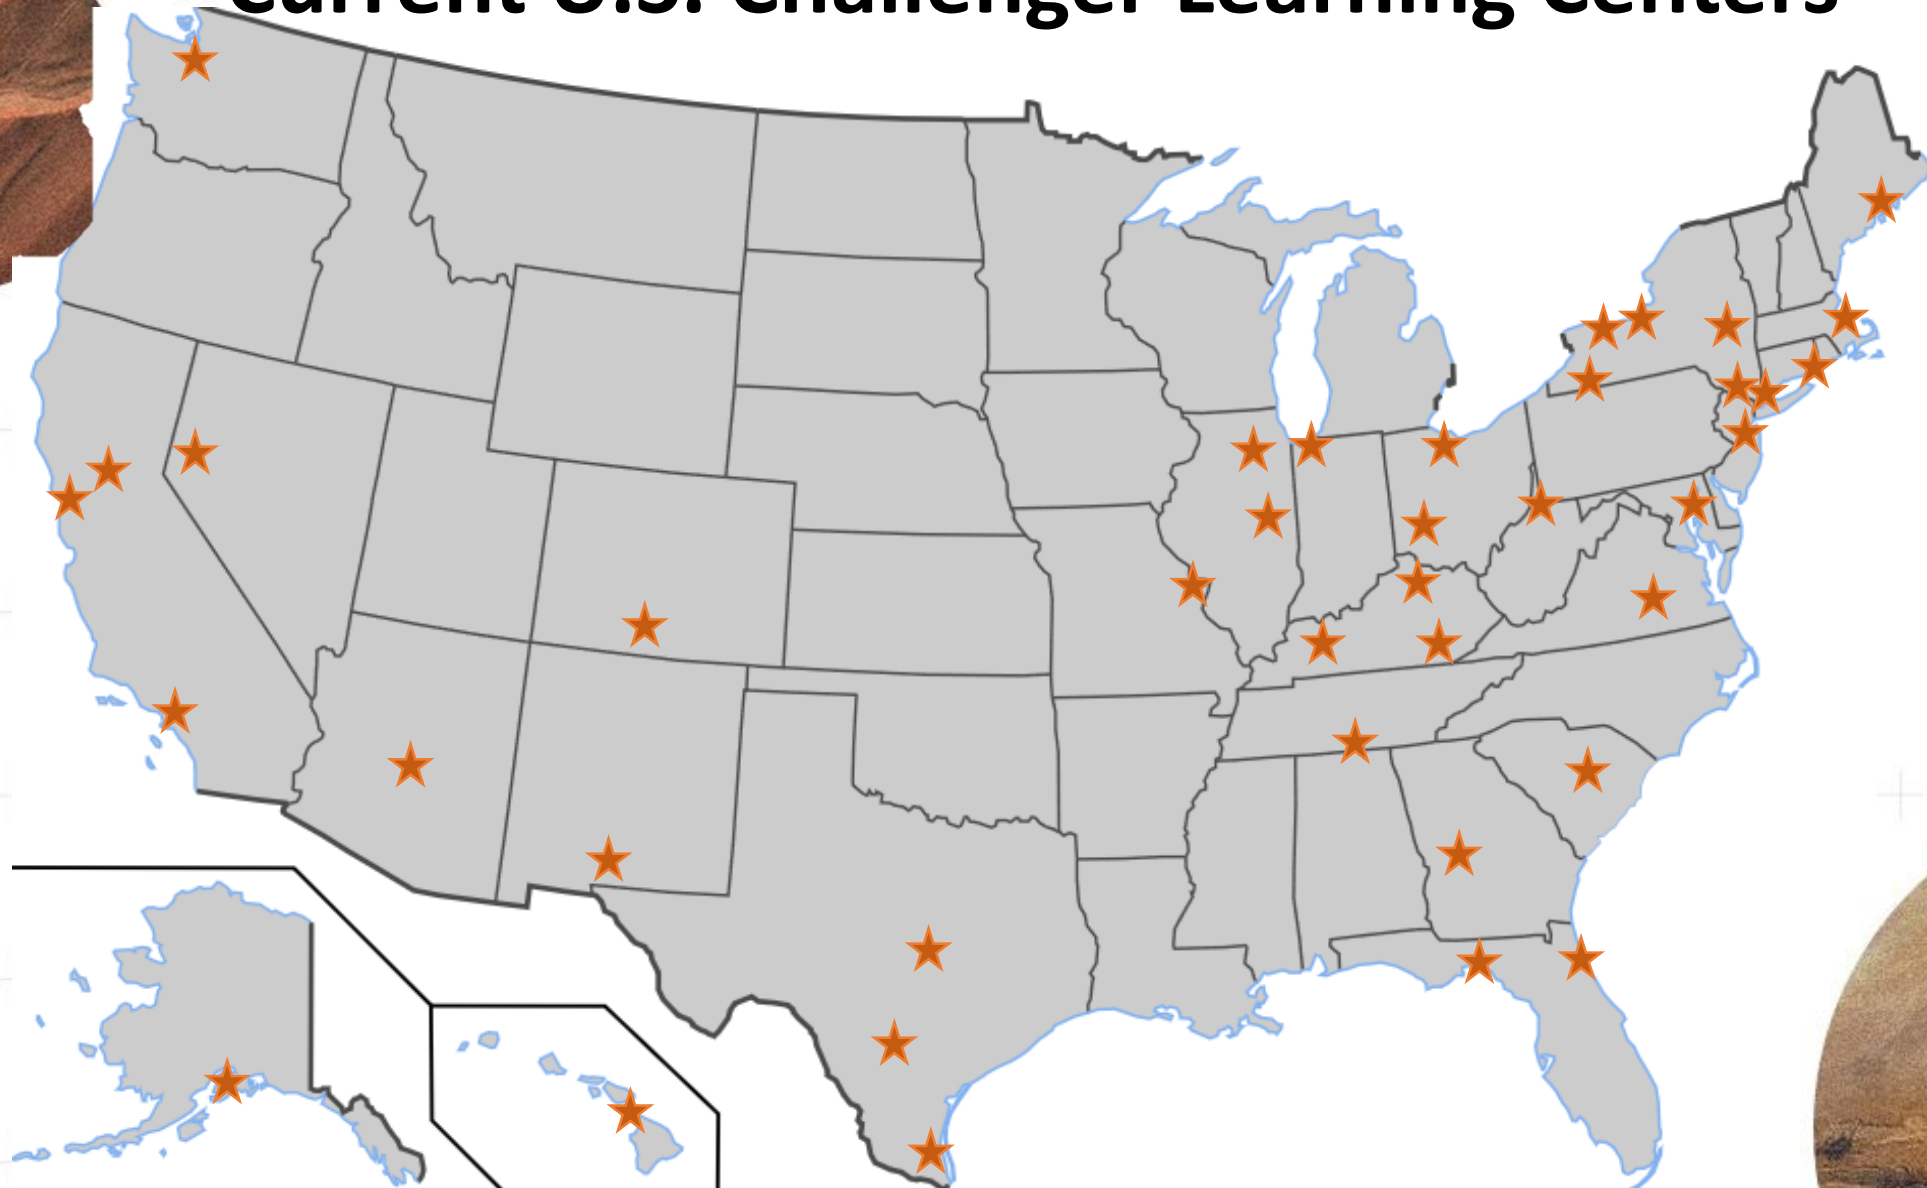

Current U.S. Challenger Learning Centers

P L E D G E

Fellow Earthlings, terrestrials, surface dwellers; the time has come to spring forth from this planet into the cosmos.

While the current generation analyzes, charts, and maps the journey to Mars, the first person to walk on The Red Planet gazes longingly out of a middle school window.

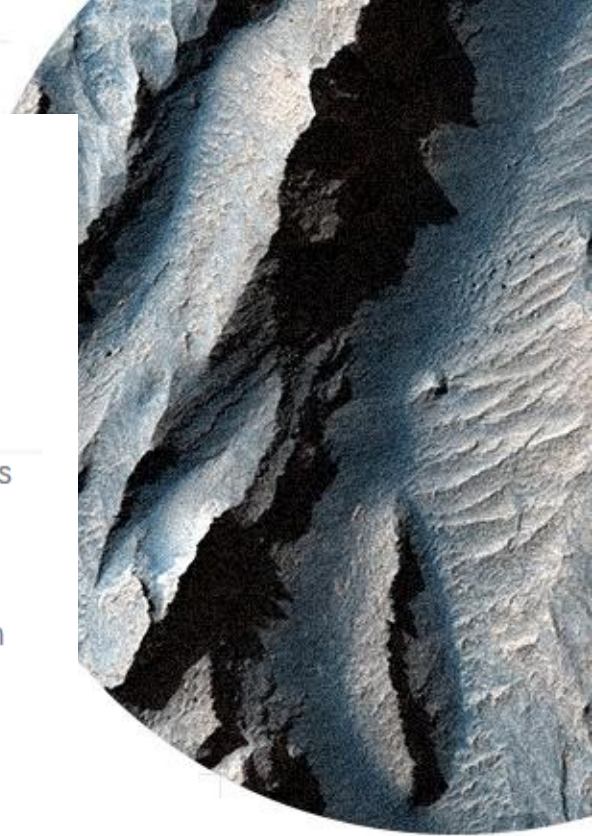

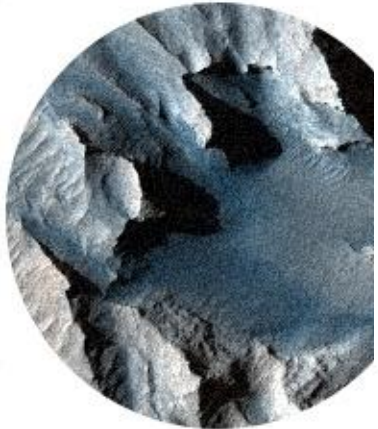

Inspire her to pursue education in science, technology, engineering, and math.

Support her journey from graduate to mission leader.

Be the catalyst that launches her into space and humanity into the future.

Support the Martians of Tomorrow. Take the Pledge.

TAKE PLEDGE
